PLEASE READ: CONSENT TO EYE DILATION

Dilation of your eyes involves using drops to relax the muscle which controls the pupil size, allowing the pupil to fully open. It takes 20 minutes for the drops to take effect before the doctor can complete the dilation. Side effects of dilation can include short-term blurred vision up close, and in some cases far away, as well as sensitivity to light. Patients with high prescriptions, new floaters and flashes, diabetes, and high blood pressure are STRONGLY advised to have their eyes dilated yearly. In addition, patients with a family history of glaucoma, macular degeneration or blindness should follow the same guidelines. <u>REFUSAL TO HAVE YOUR PUPILS DILATED MAY CAUSE YOUR DOCTOR TO BE UNABLE TO DETECT CERTAIN DISEASES</u>. **Consent** - I understand the importance of dilation, and decide to (please check one of the following): I AGREE to have my eyes dilated (or, if patient is a minor, give permission to have my child's eyes dilated) today
I REFUSE to have my eyes dilated today
